

REMARKS

Applicant has carefully reviewed the Examiner's March 26, 2003, Official Action and respectfully requests reconsideration based on the above amendments and the following comments.

Claims 1-8 remain in the application for consideration.

In response to the Examiner's objection to the abstract, Applicant has enclosed a new substitute abstract for that originally filed. Applicant respectfully submits that this objection has now been overcome.

The Examiner has further rejected claims 1-8 under 35 U.S.C. § 102(a) as being anticipated by Wang '679. Applicant respectfully traverses this rejection for the following reasons.

In Wang '679, the pivoting motion and locking motion of the adjustment member 40 are carried out by two different members. When adjusting the angle of the adjustment member 40, the user must first loosen the bolt 45 to release the locking status of the bolt 45 and then loosen the screw bolt 48 such that the adjustment member 40 can be rotated about the screw bolt 48, which acts as a pivoting shaft, relative to the mounting seats 32. When locking the adjustment member, the adjustment member 40 cannot be firmly locked in position since the screw bolt 48 is not tightened.

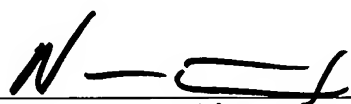

In comparison, the adjustment member 30 of the claimed invention is rotated about an imaginary center, not about a reality pivot (in fact, there is no reality pivot shaft for the claimed invention), and the position of the adjustment member 30 can be adjusted by a single screw bolt. When adjusting/positioning the adjustment member, the user only has to loosen and/or tighten the screw bolt disposed in the through hole 33 and he arched elongated mounting hole 23. This is clearly not shown or taught by Wang '679

Applicant submits that the invention is new and unobvious and not disclosed by the cited art. Accordingly, Applicant respectfully solicits the Examiner's early review and issuance of this application.

Respectfully submitted,

BROWDY AND NEIMARK, P.L.L.C.
